                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The patent discloses methods and compositions to modulate the expression of a target gene in plant cells. The method involves providing plant cells with a zinc finger protein (ZFP) which is capable of specifically binding to a target mucleotide sequence or its complementary strand within a target gene and allowing the ZFP binding to the target cells within a target gene and allowing the ZFP binding to the target cells is modulated. The ZFP and fusions of the ZFP proteins are useful for modulating or regulating gene expression and metabolic pathways in flants. The ZFP, fusion proteins and methods are useful in plant and egricultural technology. The method is useful particularly for treating a disorder in the plant cells, where the disorder is associated with abnormal expression of the target gene. The present DNA sequence is the partial sequence of pMal-m4 and ZFPm4 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New zinc finger proteins, useful for modulating or regulating gene expression and metabolic pathways in plants, e.g. for treating in the plant cells a disorder that is associated with abnormal expression of the target gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

```
New zinc finger proteins, useful for modulating or regulating gene expression and metabolic pathways in plants, e.g. for treating in the plant cells a disorder that is associated with abnormal expression of the target gene.
                                                                          'transl_except=' (pos:3124. .3126, aa:Ser)

The patent discloses methods and compositions to modulate the expression of a target gene in plant cells. The method involves providing plant cells with a zinc finger protein (ZFP) which is capable of specifically binding to a target nucleotide sequence or its complementary strand within a target gene and allowing the ZFP binding to the target of the zero sequence, where the expression of the target gene in the plant cells is modulated. The ZFP and fusions of the ZFP proteins are useful for modulating or regulating gene expression and metabolic pathways in plants. The ZFP, fusion proteins and methods are useful in plant and agricultural technology. The method is useful particularly for treating a giscultural technology. The method is useful particularly for treating a disorder in the plant cells, where the disorder is associated with abnormal expression of the target gene. The present DNA sequence is the partial sequence of pMal-Ap3 (APETALA3) and ZFPAD3 DNA
                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                       GTCAATTCAGGGTGGTGAATGTGAAACCAGTAAACGTTATACGATGTCGCAGAGTATGCCG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300

The patent discloses methods and compositions to modulate the expression of a target gene in plant cells. The method involves providing plant cells with a zinc finger protein (ZPP) which is capable of specifically binding to a target nucleotide sequence or its complementary strand within a target gene and allowing the ZFP binding to the target nucleotide sequence, where the expression of the target gene in the plant cells is modulating or regulating gene expression of the ZFP proteins are useful for modulating or regulating gene expression and metabolic pathways in plants. The ZFP, fusion proteins and methods are useful in plant and agricultural technology. The method is useful particularly for treating a disorder in the plant cells, where the disorder is associated with abnormal expression of the target gene. The present DNA sequence is the partial sequence of pMal-ml and ZFPml DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New zinc finger proteins, useful for modulating or regulating gene expression and metabolic pathways in plants, e.g. for treating in the plant cells a disorder that is associated with abnormal expression of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 3300 BP; 847 A; 874 C; 876 G; 703 T; 0 U; 0 Other;

The patent discloses methods and compositions to modulate the expression of a target gene in plant cells. The method involves providing plant cells with a zinc finger protein (ZFP) which is capable of specifically binding to a target nucleotide sequence or its complementary strand within a target gene and allowing the ZFP binding to the target molectide sequence, where the expression of the FPP proteins are useful or modulating or regulating gene expression and metabolic pathways in plants. The ZFP, fusion proteins and methods are useful in plant and agricultural technology. The method is useful particularly for treating a disorder in the plant cells, where the disorder is associated with abnormal expression of the target gene. The present DNA sequence is the partial sequence of pwal-m2 and ZFPM2 DNA New zinc finger proteins, useful for modulating or regulating gene expression and metabolic pathways in plants, e.g. for treating in the plant cells a disorder that is associated with abnormal expression of target gene. Example 4; Page 140-142; 156pp; English

The method involves providing plant cells with a zinc finger protein (ZFP) which is capable of specifically binding to a target nucleotide sequence or its complementary strand within a target gene and allowing the ZFP binding to the target nucleotide sequence, where the expression of the target gene in the plant for modulating or regulating gene expression and metabolic pathways in plants. The ZFP, fusion proteins and methods are useful in plant and agricultural technology. The method is useful particularly for treating a disorder in the plant cells, where the disorder is associated with abnormal expression of the target gene. The present DNA sequence is the Partial sequence of pMal-m3 and ZFPM3 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New zinc finger proteins, useful for modulating or regulating gene expression and metabolic pathways in plants, e.g. for treating in the plant cells a disorder that is associated with abnormal expression of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence encodes human Cdc25C phosphatase, and was expressed in Escherichia coli. It is used to make fusion proteins with Escherichia coli maltose binding protein (MBD). The specification describes fusion proteins of MBP and one of Cdc 25B1, 25B2, 25B3 and 25C. Cdc phosphatases are involved in activation of cyclin-dependent kinases (CDK) that control cell division. The fusion proteins are used to identify modulators of the specified human Cdc phosphatases, potentially useful for regulation of cell division. They are also for studying physiological or regulation of physiopathological activities of Cdc phosphatase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

Cdc25C phosphatase, amine; Cdc25 phosphatase, spontaneous alopecia; alopecia; proliferative disease; parasitic disease; viral infection; neurodegenerative disease; myopathy; anglogenesis; psoriasis; restenosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents pMAL-HSCGC25C, a plasmid encoding human CGC25C phosphatase. The specification describes the use of arylbablatic secondary or tertiary amines for the production of medicaments for inhibiting CGC25 phosphatases, especially CGC25C phosphatases. The amines of the invention are used for treating poppatatases. The amines of the invention are used for treating radiation. They are also used for treating tumoural or non-tumoural proliferative diseases, parasitic diseases, viral infections, proliferative diseases are e.g. amplogeness, pronifections. They may are e.g. amplogeness, proliferation of mines are also useful for inhibiting the proliferation of microorganisms (especially yeasts) and in the treatment of all disorders conventionally treated with vitamin K or its derivatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cdc25 Phosphatase inhibiting medicaments, useful e.g. for treating tumor diseases, viral infections, neurodegenerative disease or alopecia, containing new or known aryl-substituted amines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1528 .2677

The invention relates to a purified P30 antigen (I) chosen from 3 fully defined Toxo30de13C, Toxo30de12C and ToxoP30 MIX1 sequences, having 1-6 amino acids added to the C-terminus of the amino acid sequence of Toxo30de12C P30 antigen sequence, or comprising an amino acid sequence in mino acid sequence of Toxo30de13C P30 antigen sequence is substituted amino acid sequence of Toxo30de13C P30 antigen sequence is substituted with alanine, or comprising the amino acid sequence chosen from MBP-Toxo30de13C (S2-294aa) and MBP-ToxO30MIX1 fusion proteins. (I) is useful for detecting the presence of IGM antibodies to Toxo30de13C pand and processed sequence of IGM antibodies to Toxo30de13C pand detecting the presence of IGM antibodies with a composition comprising (I) and detecting the presence of (I)/IGM antibody complexes. The present sequence represents DNA encoding a MBP-moventy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a purified P30 antigen (I) chosen from 3 fully amino acids added to the C-terminus of the amino acid sequences, having 1-6 moxo30del2C P30 antigen sequence, or comprising an amino acid sequence of roxo30del2C P30 antigen sequence, or comprising an amino acid sequence in which at least one of the five C-terminal cysteine amino acids of the amino acid sequence of Toxo30del3C P30 antigen sequence cis substituted with alanine, or comprising the amino acid sequence chosen from MBP-Toxo30del3C(52-294aa) and MBP-ToxO30MIX1 entibodies to Toxoplasma gondii in a test sample, which involves contacting the test sample suspected of containing the IgM antibodies contacting complexes. The presence of IgM antibody complexes. The present sequence represents of (I)/IgM antibody complexes. The present sequence represents DNA encoding a MBP-TOXO930 fusion protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240

```
The invention relates to a purified P30 antigen (I) chosen from 3 fully defined Toxo30de13C, Toxo30de12C and Toxo930 MIXI sequences, having 1-6 amino acids added to the C-terminus of the amino acid sequence of Toxo30de12C P30 antigen sequence, or comprising an amino acid sequence in which at least one of the five C-terminal cysteine amino acids of the amino acid sequence of Toxo30de13C P30 antigen sequence is substituted with alanine, or comprising the amino acid sequence consent from MBP-TOxo30de13C P30 antigen sequence chosen from MBP-TOxo30de13C(52-30da), MBP-TOxo30da14C(52-294a) and MBP-TOxO30MIXI fusion proteins. (I) is useful for detecting the presence of IgM antibodies to Toxoplasma gondii in a test sample, which involves contacting the test sample suspected of containing the IgM antibodies with a composition comprising (I) and detecting the presence of (I)/IgM antibody complexes. The present sequence represents DNA encoding a MBP-TOxOP30 fusion protein of the invention.
                                                                                                                                                    Novel purified polypeptide having sequence identity to amino acid sequence of P30 antigen of Toxoplasma gondii e.g. Toxo30del3C, Toxo30del2C, ToxoP30 MIX1, useful for detecting presence of IgM or IgG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GTCAATTCAGGGTGGTGAATGTGAAACCAGTAACGTTATACGATGTCGCAGAGTATGCCG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a purified P30 antigen (1) chosen from 3 fully defined Toxo30del3C, Toxo30del2C and ToxoP30 MIXI sequences, having 1-6 amino acids added to the C-terminus of the amino acid sequence of Toxo30del2C P30 antigen sequence, or comprising an amino acid sequence in which at least one of the five C-terminal cysteine amino acids of the amino acid sequence of Toxo30del3C P30 antigen sequence is substituted with alanine, or comprising the amino acid sequence consent from MBP-Toxo30del3C(52-300aa), MBP-TOXO30del4C(52-294aa) and MBP-TOXO30MIXI fusion proteins. (1) is useful for detecting the presence of IgM antibodies to Toxoplasma gondii in a test sample, which involves contacting the test sample suspected of containing the IgM antibodies with a composition comprising (1) and detecting the presence of (1)/IgM antibody complexes. The present sequence represents DNA encoding a MBP-TOXOP30 fusion protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

antibodies to Toxoplasma gondii in a test sample, which involves contacting the test sample suspected of containing the IgM antibodies with a composition comprising (I) and detecting the presence of (I)/IgM antibody complexes. The present sequence represents DNA encoding a MBP-Toxop30 fusion protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a purified P30 antigen (I) chosen from 3 fully defined Toxo30del3C, Toxo30del2C and ToxoP30 MIXI sequences, having 1-6 amino acids acids added to the C-terminus of the amino acid sequence of ToxO30del2C P30 antigen sequence, or comprising an amino acid sequence in which at least one of the five C-terminal cysteine amino acids of the amino acid sequence is substituted with alanine, or comprising the amino acid sequence is substituted with alanine, or comprising the amino acid sequence chosen from MBP-TOXO30del3C (52-230aa), MBP-TOXO30del4C (52-294aa) and MBP-TOXO30MIXI fusion proteins. (I) is useful for detecting the presence of IgM antibodies to ToxOplasma gondii in a test sample, which involves contacting the test sample suspected of containing the IgM antibodies with a composition comprising (I) and detecting the presence of (I)/IgM antibody complexes. The present sequence represents DNA encoding a MBP-CXC TOXOP30 fusion protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
